KIDS LEARN FOUNDATION

MEDICATION SUPPORT HANDOVER REPORT

27th August, 2025

PREPARED BY
Bonaholo Ebewele
Administrative Intern

PROGRAM OVERVIEW

The Medication Support with Cerebral Palsy Project was designed to provide selected children with Cerebral Palsy access to prescription lifesaving anti-seizure medications to improve the quality of their lives.

The project provided the selected children with two months supply of their prescribed medication (Encorate Chrono 200mg and 500mg), thereby reducing the cost from the parents and ensuring improved quality of life for the children.

This project is important because in the course of our work, one of the major causes of deaths in children with Cerebral Palsy that we have experienced is uncontrolled seizures which is exacerbated by the lack of access to medication. This lack of access to medication has been worsened by the rising costs of medication due to inflation, leading many caregivers to either skip the medication entirely or reduce dosage below what is prescribed in a bid to make the existing medication last longer.

ARRIVALS AND BASELINE INTERVIEWS

Participants began arriving as early as 9.30am. Each participant was signed in and a short baseline interview to collect data on how long their children have been on medication and the impact of the cost of living on their ability to continue to adhere to prescriptions was conducted. 5 participants were present and interviewed.

The Participants showed their appreciation and prayed for the sponsors of the Medication. They also testified on how far it was going to go for them. 100% of participants attested to cost inflation of medications leading to them having to not buying medicationa accordingly.

GODWILL MESSAGES AND PRESENTATION OF MEDICATIONS

Bonaholo Ebewele proceeded to give the goodwill message to the parents, she appreciated the parents for coming down to the foundation despite the rainfall to come get the medication for their children and sharing the purpose of the collaborative project with them and how glad we are to support the health and well-being of the Children.

This moved swiftly into the presentation of the medication packs which had been previously packaged based on each beneficiary's received prescription

Number of Participants

We had 5 Participants present who came in physically for the collection of the medications.

1. Mrs Opeyemi Duyile Akinlabi
2. Mrs Uzor Oluchi Maureen
3. Aborisade Taiwo Omobolanle
4. Akinwande Cecilia Adebola
5. Mrs Alabi
