INTRODUCTION

Children living with cerebral palsy often require long term medication to manage associated conditions such as seizures, muscle spasticity, pain, gastrointestinal challenges, and other co-existing health concerns. However, for many families, the rising cost of healthcare and prescription medications presents a significant financial burden, making it difficult to maintain consistent treatment. Interruptions in medication can adversely affect a child's health, development, and overall quality of life, while also increasing emotional and financial stress for caregivers.

Recognizing the need, the foundation implemented the Medication Support Handover Project to provide direct assistance to families whose children require continuous medication. The project was designed to reduce the financial burden on caregivers, and improve the health and well being of children living with cerebral palsy.

This intervention was made possible through the generous sponsorship of Mr Micheal Fadeyi, a Gender and Disability Inclusion Specialist. His commitment to disability inclusion and equitable access to healthcare enabled the Foundation to provide life changing support to families who would otherwise struggle to afford their children's essential medications.

PROJECT IMPLEMENTATION

Following a beneficiary selection process, 10 children with cerebral palsy were enrolled in the medication support program. The foundation worked closely with caregivers to collect and verify current medical prescriptions, ensuring that each child received medications specially prescribed by their healthcare provider.

A medication handover event was organized, bringing together beneficiary families to receive their children's medications in a structured and supportive setting. During the handover, caregivers were encouraged to continue administering the medications as prescribed by their medical professionals and were reminded of the importance of maintaining consistency in their children's treatment plans.

Each of the ten beneficiaries received a 3 month supply of their prescribed medications, providing families with temporary financial relief while helping to ensure continuity of care. By covering 3 months of medication costs, the project enabled caregivers to redirect limited household resources toward other essential needs, including nutrition, transportation to medical appointments, and educational support to their children.

PROJECT IMPACT

The Medication Support Handover Project had an immediate and meaningful impact on the lives of the beneficiary families. Access to a 3 month supply of medication reduced the likelihood of treatment interruptions and gave caregivers peace of mind, knowing that their children could continue receiving the medications necessary for their health and wellbeing.

Beyond the direct health benefits, the project strengthened caregivers confidence and reinforced the Foundation's commitment to holistic support for children living with cerebral palsy. Families expressed appreciation for the intervention, noting that the financial relief would allow them to better manage other pressing household expenses while maintaining their children's treatment.

The project also highlighted the importance of partnerships in advancing disability inclusion. Through the generous support of Mr Micheal Fadeyi, ten (10) children with cerebral palsy gained improved access to essential medications, demonstrating how collaborative efforts can remove barriers and improve the quality of life for children with disabilities.

ACKNOWLEDGEMENT

The Let Cerebral Palsy Kids Learn Foundation extends its heartfelt appreciation to Mr Micheal Fadeyi for sponsoring this important initiative. As a Gender and Disability Inclusive Specialist, his dedication to promoting equitable access to essential services has made a tangible difference in the lives of children with cerebral palsy and their families.

His generosity has not only provided critical medical support but has also reaffirmed the importance of collective action in ensuring that every child, regardless of ability, has the opportunity to live a healthier and more fulfilling life. The Foundation remains grateful for his partnership and looks forward to continuing collaborations that create lasting impact for children with disabilities.
